Caliber Bar with Boresight

A caliber bar with boresight is a tool used in firearms to align the firearm's barrel with the sights (optical or iron) before zeroing. The caliber bar, which fits into the barrel, acts as a reference point to ensure that the sight is correctly aligned with the bore axis. This process is called boresighting and it helps to quickly and accurately get the firearm ready for shooting.

TECHNICAL FEATURES

TECHNICAL SPECIFICATIONS

S no.	Item	Parameter	Range
1.	Caliber bar with boresight fitment mechanism	Material	Stainless steel, caliber bar, 40mm stainless steel shaft
		Width & Length	Width 40mm & Length 300mm
		Diameter	40-41mm
		Weight	3.5 Kg
		Compatible Weapon System	40mm L/70 Bofors Gun
